Cover Letter

Hey there awesome team of Catawiki,

I'm a Backend developer with 5+ years of experience using Typescript, Express, and AWS services. I have a strong background in software development, which includes delivering innovative features, identifying bugs and finding solutions, coaching junior developers, and collaborating in cross-functional teams in an agile environment. In my previous experiences, I've worked closely with frontend developers, designers, and QA to implement high-quality features, provide our users with the best experience and ensure that all modules of the project are aligned and working seamlessly together.

I'm excited to apply for this Senior Nodejs Developer role at Catawiki, as we share similar beliefs. I'm keen to work in an environment thats open to innovation and have the opportunity to learn and collaborate in a top-notch community. I love that you support people's desire to keep learning and encourage them to put their ideas forward.

I'm a committed and reliable developer with a can-do attitude who values collaboration and sharing knowledge with others. I like to code and am eager to work on new challenges, and I'd love the opportunity to be part of a talented team where we inspire each other to improve and achieve our goals.

Thank you for considering my application. I'm looking forward to meeting you soon and learning more about the position.

Sincerely,

Oscar Castillejo
